# Was brauchen wir

- A facebook developer account (classic account registered on [developer.facebook.com](https://developer.facebook.com))
- An heroku account + heroku cli installed
  - Or an HTTPS url leading to your app
  - Or use [glitch.com](https://glitch.com) (for testing)
- Basic skills

# What's Flask ?

- Python
- Micro-framework

based on :

- Werkzeug (WSGI – Web Server Gateway Interface)
- Jinja2 (HTML templating)

```
from flask import Flask
app = Flask(__name__)

@app.route("/")
def hello():
    return "Hello World!"
```

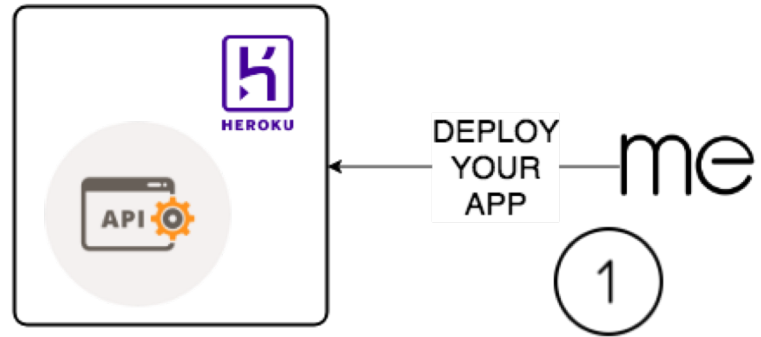

# What's Heroku ?

- PAAS (Platform As A Service)
- Cloud Platform
- Focus only on building your app
- Amazing free plan
- Lots of easy-to-use addons

Postgres | Redis | Mongo | Graphene | Scheduler

FB needs to verify that this webhook is yours.

# Rapidamente

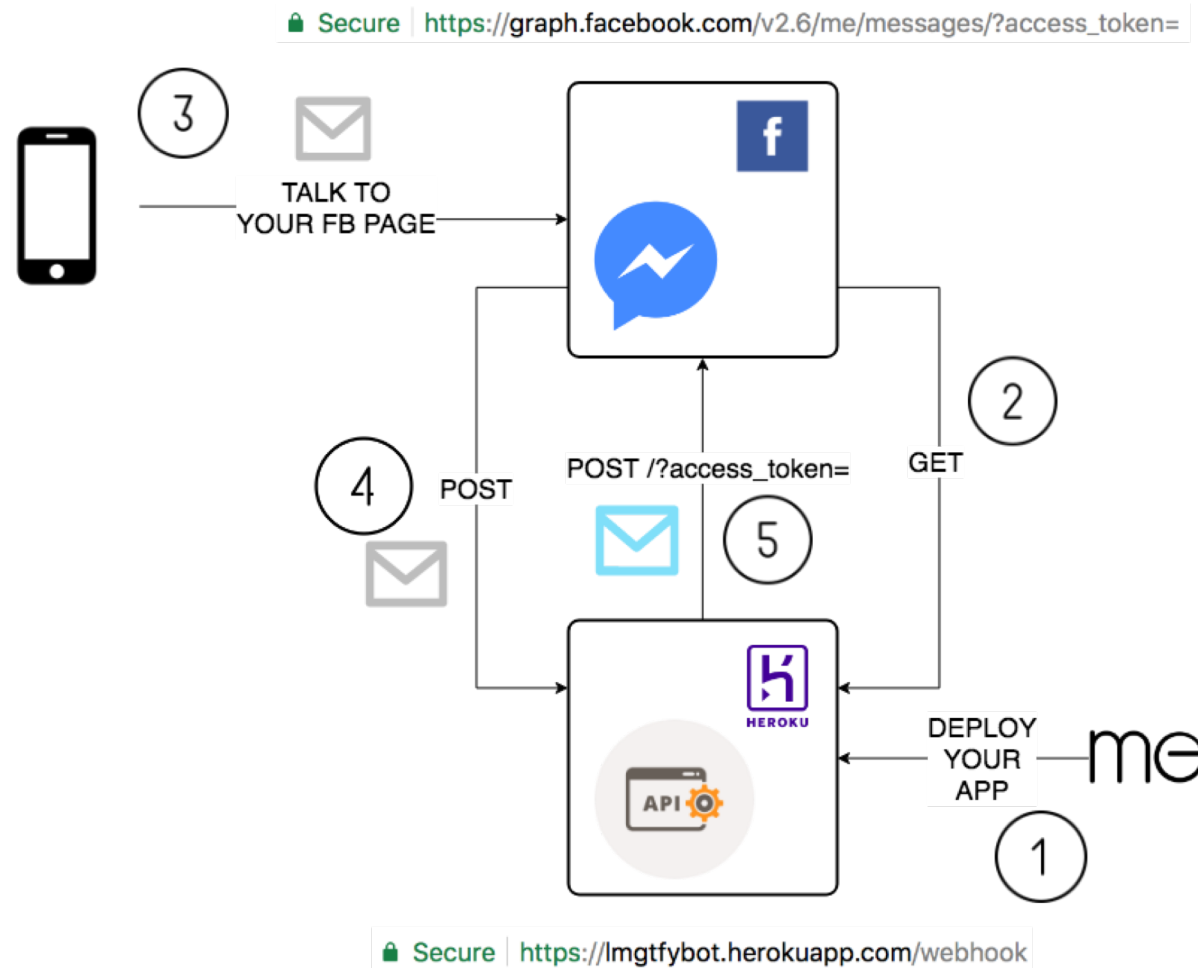

# Rapidamente

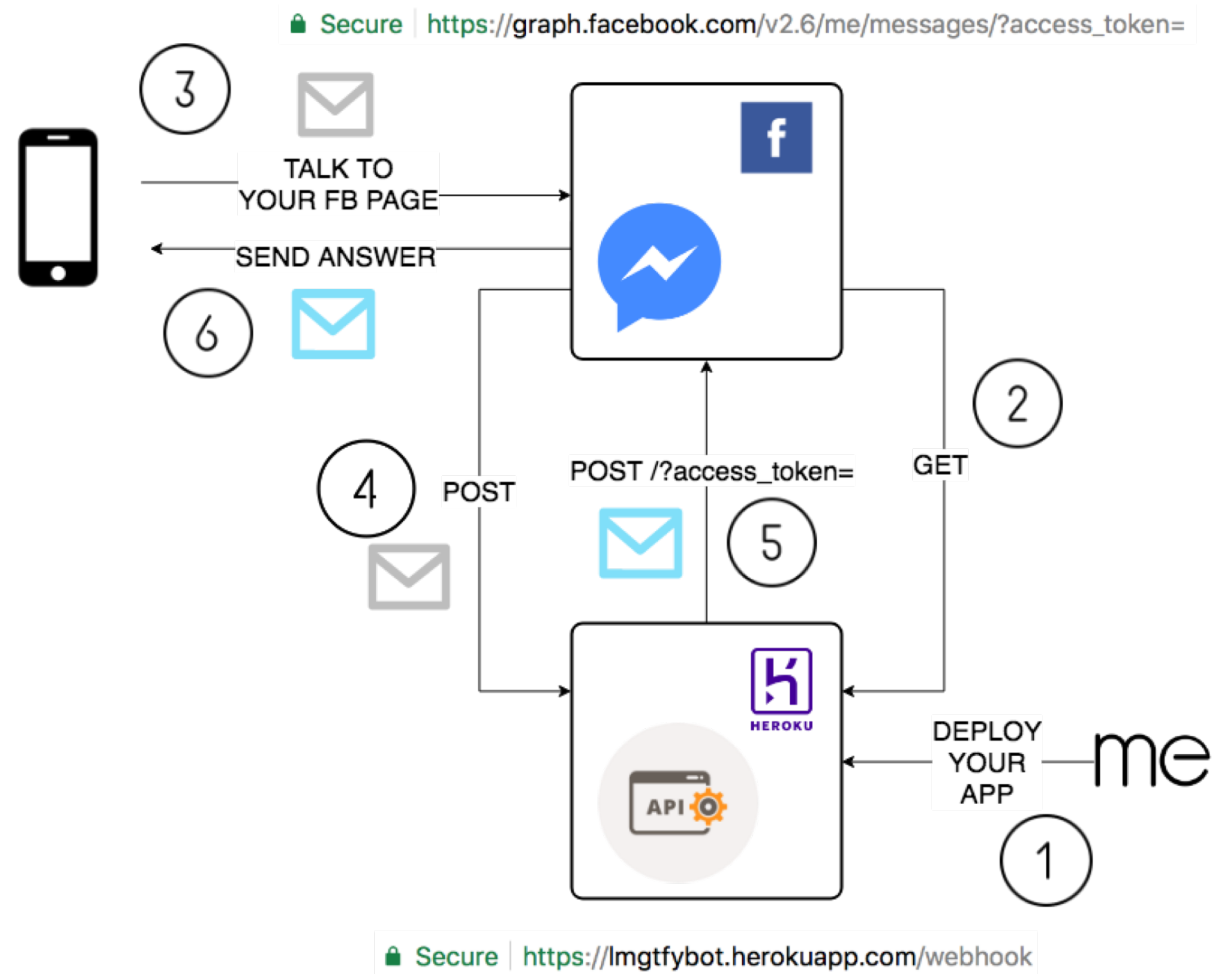

# Rápidamente

Your app sends back the response via a POST request to the FB graph api with the access\_token.

# Rápidamente

# Live demo ?

# Steps

1. Create a FB page
2. Create a FB app
3. Link it to your page
4. Get an `access_token` for your page
5. Link messenger to this page
6. Enable basic permission on « messages »
7. Deploy your app on heroku
8. Paste the `access_token` in the `env_vars`
9. Paste your `https://app - url` to your FB app

# Goulenn ?
